## **Technical Project Manager – Great Opportunity!**

Everyone is looking for superstars and so are we, but we need a different kind of superstar. Ideal candidates for our fast-paced company are highly motivated individuals with a technical background who have successfully managed multiple projects simultaneously – and who love doing it! One of our core values is that our work is a reflection of ourselves and we want to attract others who agree with this philosophy. Now in our eighth year of business, we are a stable and growing company. The organizations that hire us seek the very highest level of quality and that's what we produce. Business is booming and clients are literally waiting in the queue for our availability. This is a great opportunity to become more than a developer or a project manager, but to combine the best of both. Join our team and be an integral part of a vibrant, growing company, performing high-profile and meaningful work in a dynamic and exciting environment.

Our projects include large CRM and ecommerce implementations and custom solution development, driven by the unique business needs of each of our clients. The solutions are based on .NET and MSSQL and include C# and XML. As a technical project manager, you should have experience both developing and implementing these technologies. Familiarity with content management systems, application integration and business intelligence/reporting will give you an edge.

You should be experienced with estimating the scope, budget, timeline, and resources necessary to complete a project. This includes defining requirements, building prototypes, creating work orders, estimating budgets, and establishing project plans in MS Project. You will be responsible for managing both deadlines and client expectations and providing regular progress reports to senior management. You should enjoy writing SQL and be able to contribute to the development efforts when necessary. You should enjoy working with people, be able to manage quality assurance testing and be comfortable demonstrating software functionality to end users.

There is plenty of room to grow if you have high standards and a can-do attitude. We're looking for good work, and good work is well rewarded. People with good insight and instincts, who can handle multiple responsibilities and changing priorities, will always be important to us. Everyone who works here helps to grow the business, shape the office culture and improve the internal procedures and we believe in rewarding these actions.

### **What you can do for us:**

- Be part of a team that designs, develops, extends and implements dynamic .NET Web and e-commerce solutions
- Find ways to solve the business problems of our clients and clearly communicate with clients, developers, management and third parties
- Define and document reusable business processes to streamline our workflow

**What we expect you have:**

- BS (preferably in Business Management, MIS, Computer Science, or related discipline).
- 2+ years experience with SQL (including writing complex stored procedures)
- 2+ years Web development (C#, CSS, Ajax, and JavaScript)
- 1-2 years managing enterprise-level, full lifecycle software development projects
- Knowledge of UML and understanding of Design Patterns
- Solid understanding of general business and accounting principles
- Excellent communication skills (written and oral)

**What we can do for you:**

- Six month review schedule, with salary increase and bonus potential for exceptional work
- 100% paid medical, dental, and life insurance for employees
- \$2,000 training allowance per year
- Three weeks leave (two weeks vacation and one week personal) per year
- Flexible hours
- Comfortable environment in Falls Church, VA
- The opportunity to help define the team dynamic and office culture
- Our salaries are based on talent and fit and we pay well for it. What can you offer us?

Interested in being more than just a cog? Have a technical background and want to move into project management? Email us at [jobs@dksolutions.com](mailto:jobs@dksolutions.com) and describe not just your skills, but what you bring as a person. Tell us about what makes you happy. Describe the coolest project you worked on. What blogs you read. Send us something about you along with your resume and let's talk!
