## **Web Developer – Great Opportunity!**

Everyone is looking for rockstar developers and so are we, but we need a different kind of rockstar. Our ideal candidates look at existing systems and think about how to make them work better for our clients. We deliver products that are easier to use, more functional and elegant than others in our market. Founded in 2000, we serve clients who seek the highest level of quality, and our business is booming. We are a stable and growing company, with clients waiting in line for our availability. We are expanding and this is a great opportunity to escape from being just a programmer. We currently have two openings for talented developers.

You should take satisfaction from the code you write and be interested in seeing existing products used in new ways. You should be ready to work hard and see your code move rapidly into production. There is a deep body of knowledge within our existing .NET framework waiting to be explored, and if you're willing to learn and seek out solutions, we can help you put out good software that gets appreciated and used.

The ideal skill set includes SQL, C#, XML and ASP.NET. Experience with ecommerce and shopping cart applications is required. Familiarity with SharePoint, content management systems and application integration is also a plus – but we are willing to train! There is so much to learn that the developer who has insight and good instincts will always be important to us.

There is plenty of room to grow if you have high standards, a can-do attitude and believe that your work is a reflection of yourself. We're looking for good work, and good work is well rewarded. Developers with good insight and instincts, who can handle multiple responsibilities and changing priorities, will always be important to us. Everyone who works here helps to grow the business, shape the office culture and improve the internal procedures and we believe in rewarding these actions.

### **What you can do for us:**

- Be part of a team that designs, develops, extends and deploys dynamic .NET Web and e-commerce solutions
- Find creative ways to solve the business problems our clients bring to us and then implement the software you write
- Develop and modify SQL stored procedures

### **What we expect you have:**

- BS (preferably in Computer Science, Engineering, Mathematics, or related discipline)
- 2+ years experience with Microsoft SQL Server and experience creating stored procedures.
- 1-2 years experience with Web development (ASP.NET/C#, XML, JavaScript, HTML)
- Experience with full product development life-cycle and development processes
- Knowledge of UML and understanding of Design Patterns
- Basic understanding of general business and accounting principles
- Experience with requirements analysis and client interaction
- Excellent communication skills (written and oral)

### **What we can do for you:**

- Six month review schedule, with salary increase and bonus potential for exceptional work
- 100% paid medical, dental, and life insurance for employees
- \$2,000 training allowance per year
- Three weeks leave (two weeks vacation and one week personal) per year
- Flexible hours
- Comfortable environment in Falls Church, VA
- The opportunity to help define the team dynamic and office culture
- Our salaries are based on talent and fit and we pay well for it. What can you offer us?

Interested in being more than just a cog? Email us at [jobs@dsk solutions.com](mailto:jobs@dsk solutions.com) and describe not just your skills, but what you bring as a person. Tell us about what makes you happy. Describe the coolest project you worked on. What blogs you read. What developers you like. Send us something about you along with your resume and let's talk!
